

Final Project Project: DreamStream

Streaming and Digital Media

Presented by Aaron Pettiford

Discovery & Research Phase

1. Vague Design Problem

"Discovery on DreamStream is broken. Users can't find new communities they 'vibe' with because the interface relies on static thumbnails and high-friction ads."

2. Industry Research Validation

- ✓ **Source 1 (Financials):** DreamStream 2025 Strategy Report indicates ad revenue is stabilizing; growth relies on retaining users through *community building*.
- ✓ **Source 2 (Audience):** 2025 Mobile Usage Trends show Gen Z prefers "Vertical Discovery" (TikTok style) over grid browsing.

Viewership Distribution

Meet Sam

Meet "Sam" The Vibe Seeker (Target Audience)

Age: 22 | **Role:** College Student

Sam has 30 minutes between classes to unwind. He wants to chill with a community to chat with but is bothered by a 30-second ad every time he taps a random stream.

User Need Statement

*"Sam needs a friction-free way to preview a streamer's personality and community vibe *before* committing to watching an ad, so that he can find a meaningful connection without wasting time."*

Process: From Sketch to Concept

Ideation & Sketching

League tournament sessions focused on "frictionless entry." These are sketched ideas for bypassing the ad-wall using live previews.

Flowchart

User Flow Mapping

This is a flowchart, which is like a journey that goes from "Passive Scroll" to "Active Participation," identifying key drop-off points in the current app.

Class Testing

Test Result: "I swiped to the profile but got stuck. There was no back button."

Iteration: Based on class feedback, we added a clear "Close Overlay" interaction in the final software build.

Final Build:

DreamStream

A Vertical Discovery Feed

DreamStream is a new dedicated tab in the mobile app that serves a more personalized, vertical feed of **live** moments.

- ✓ Ad-Free Previews (30s limit)
- ✓ Instant "Vibe Check"
- ✓ Single-Tap Community Entry

| Key Features

Vertical Feed

Leverages the familiar "swipe" gesture to quickly browse live content, tailored to mobile-first habits.

Ghost Mode

Users can watch 30 seconds of a stream anonymously without triggering pre-roll ads, reducing bounce rates.

Mini Profiles

Contextual overlays show the streamer's "Vibe Tags" (e.g., Chill, Competitive) and current viewer count.

| Business Impact

By solving the discovery problem for the "Long Tail" of streamers, DreamStream can unlock significant growth in 2025.

40%

Increase in Time Spent
on Mobile App

3x

Higher Follow Rate
for Small Streamers

15%

Growth in New
User Retention

A person with long hair, wearing a headset and a light blue hoodie, is seated in a black gaming chair at a desk. They are using a dual-monitor setup. The left monitor displays a colorful, stylized game with a pink and blue track. The right monitor shows a software interface with a green cursor. A camera is mounted on a boom arm above the right monitor. The desk is illuminated with purple light, and there are two bright rectangular light sources in the background.

Connecting Communities

DreamStream isn't just a feature; it's a commitment to the creators who built this platform. It turns "scrolling" into "belonging."
